PROFESSIONAL SUMMARY

Backend Developer with 1.6 years of industry experience and 6 months intensive real-time training. Skilled in **.NET Core**, **PostgreSQL**, **REST APIs**, **distributed systems**, and scalable backend systems. Self-taught React developer with deployment experience. Passionate about **AI agents**, **cloud native development**, and backend optimization.

WORK EXPERIENCE

Backend Developer

Sardonix Technologies Pvt. Ltd.

📅 Jun 2024 – Nov 2025

- Built and maintained backend features for enterprise security software using **.NET Core**.
- Designed secure REST APIs, backend workflows, and validation pipelines.
- Optimized SQL queries and large-scale data operations using **PostgreSQL** and **ClickHouse**.
- Improved system reliability, performance, and logging pipelines.
- Collaborated with engineering and QA teams under Agile.

Trainee Backend Developer

Sardonix Technologies Pvt. Ltd.

📅 Oct 2023 – Apr 2024

- Completed 6-month technical training with real-time simulations.
- Gained strong foundation in **.NET**, **REST APIs**, **SQL optimization**.
- Practiced debugging, industry coding standards, and version control.

EDUCATION

Bachelor of Engineering (CSE)

Parisutham Institute of Technology and Science

📅 Graduation Year: 2023

TECHNICAL SKILLS

- **Languages:** Golang, C#, Python (Basics)
- **Frameworks & Tools:** .NET Core, React (Basic), Docker, GitHub, Vercel
- **Databases:** PostgreSQL, Qdrant, ClickHouse
- **Search & Streaming:** Elasticsearch, Kafka
- **Other Skills:** REST APIs, Authentication, System Design Basics, Deployment Pipelines

INDUSTRY PROJECTS

Contributed to two enterprise-grade security applications (project details and names confidential under NDA).

- Worked on API logic, backend modules, secure data flow, and performance optimization.
- Improved backend performance and scalability by optimizing REST APIs, reducing latency, and refactoring core .NET Core service modules for high-traffic production environments.
- Improved database efficiency by redesigning slow PostgreSQL queries, adding strategic indexes, and streamlining large-scale data workflows to enhance overall system responsiveness.
- Improved system reliability and uptime by implementing structured logging, real-time monitoring, and automated alerting across Linux-based production servers.
- Improved deployment quality by automating CI/CD pipelines, enforcing validation checks, and reducing manual release errors across staging and production environments.
- Improved security posture by implementing validation layers, enforcing role-based access control, and hardening backend services to ensure secure API communication.

PERSONAL PROJECTS

EBuy – Ecommerce Application

- **Live Demo:** <https://ebuy-fawn.vercel.app/>
- Built a functional UI using **React**.
- Implemented product listing, cart operations, state management, responsive UI.
- Deployed with GitHub → Vercel CI pipelines.

AI Developer Agent (In Progress)

- Backend-first AI agent for automation, code generation, task orchestration.
- Uses embeddings + vector search with **Qdrant**.
- Modular backend architecture for command execution flows.

AI Personal Assistant Agent (In Progress)

- Automation agent leveraging **Elasticsearch, Qdrant, Kafka**.
- Focus on long-term memory, workflow chains, adaptive execution.
